

# Modern Approach To Chemical Industry

By

**Prof. Rohit Muthe**

**Assistant Professor**

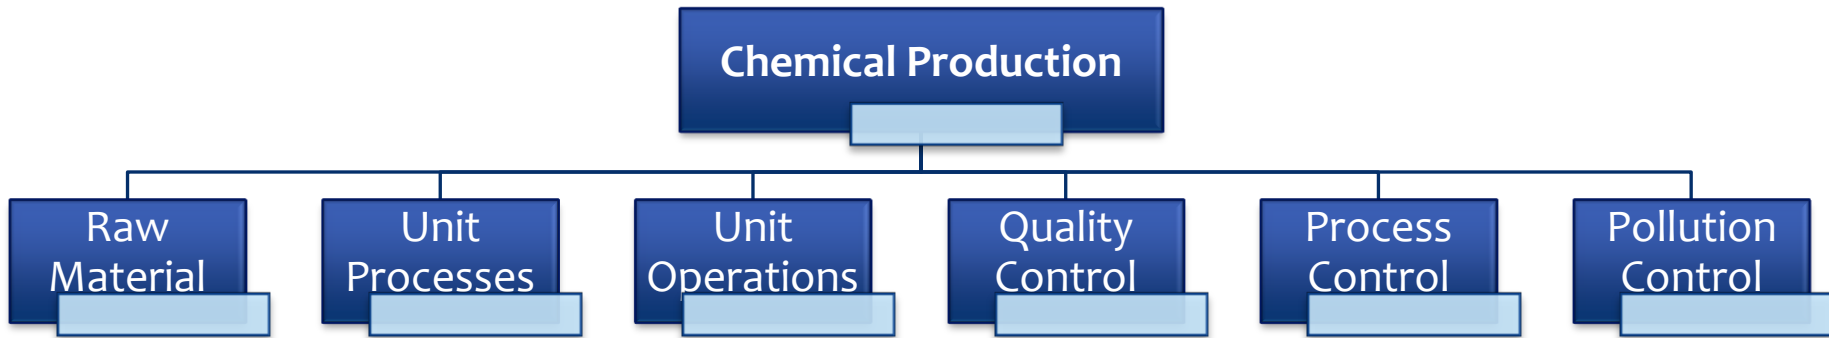

**Department of Chemistry**

**Adv. M. N. Deshmukh Arts, Science  
and Commerce College Rajur**

# Basic Requirement of Chemical Industries

## Chemical Production

Manufacture of chemical products requires raw materials and it involves various operations and processes

# Raw Materials

- \* Any substance or a chemical which can be processed to produce the desired product is called as raw material

## Natural Raw Materials

Carbon Compounds

Hydrogen

Nitrogen and Oxygen

Chlorine and NaOH

Sulphur, Phosphorous, Fluorine and other inorganic compounds

# Raw Materials from other Industries

Sodium chloride

Caustic Soda

Molasses

Benzene

Petroleum fractions

Naphthalene

Non-edible Linseed oil

**Small Molecules**

- Low boiling point
- Light in colour
- Easy to light
- Runny

**Large Molecules**

- High boiling point
- Dark in colour
- Hard to light
- Thick

# Unit Processes

The commercialization of a chemical reaction under such conditions which prove to be economically profitable is called as Unit Processes

**Some important unit processes**

- Alkylation
- Amination by ammonolysis
- Esterification
- Hydrolysis
- Halogenation
- Nitration
- Oxidation
- Cyclisation
- Isomerisation
- Dehydration
- Sulphonation
- Electrolysis

# Unit Operations

The operations carried out for designing involves an engineers work with a specific purpose and with the help of a special type of equipment used in a chemical reaction is called as unit operation.

## Some important unit operations

- Adsorption
- Centrifugation
- Crystallisation
- Distillation
- Dissolution
- Drying
- Evaporation
- Filtration
- Heat Transfer
- Mixing
- Screening
- Sedimentation
- Solvent extraction

# Quality Control (QC)

- System of routine technical activities, to **measure and control the quality** of the record.
- Involves the analysis or testing of raw material and finished products for their standard specification.
- Technical grade, analytical grade, reagent grade, spectroscopic purity etc. are used to denote the degree of purity and quantity of compounds.

# Quality Assurance (QA)

The activities which include a planned system of review measures governed by personnel not directly involved in inventory compilation/development process is called quality assurance.

**QUALITY ASSURANCE JOB DESCRIPTION**

# Process Control

The control of variables such as temperature, concentration, pressure, time, flow rate of reactant etc. for getting the desired product in an economic way is called process control.

## Process Control

Analysis of Raw material

Analysis of Intermediate product during manufacturing

Analysis of the End Product

# Research and Development

Creative work undertaken on a systematic basis in order to increase the stock of knowledge, including knowledge of man, culture and society and the use of this stock of knowledge to devise new applications

**Research**- Develops new changes

**Development**- Modification of research

"I smell toffee!"

# Pollution Control

## Pollution Control

Dry Process  
(Remove Solids  
Pollutants)

Wet Process  
(Remove Liquid  
Pollutants)

# Safety Measures

## Safety Measures

- Accountability.
- Process knowledge and Documentation.
- Process safety reviews for capital project.
- Process risk management.
- Management of change.
- Process and equipment integrity.
- Incident investigation.
- Training and performance.
- Human factors.
- Company standards, codes and regulations.
- Audit and Corrective actions.
- Enhancement of process safety knowledge.

# Economics of a Chemical Process

## Economics of a Chemical Process

### Capital Investment

Building  
Chemical plant  
Material  
Equipment  
Storage facility

### Working Capitals

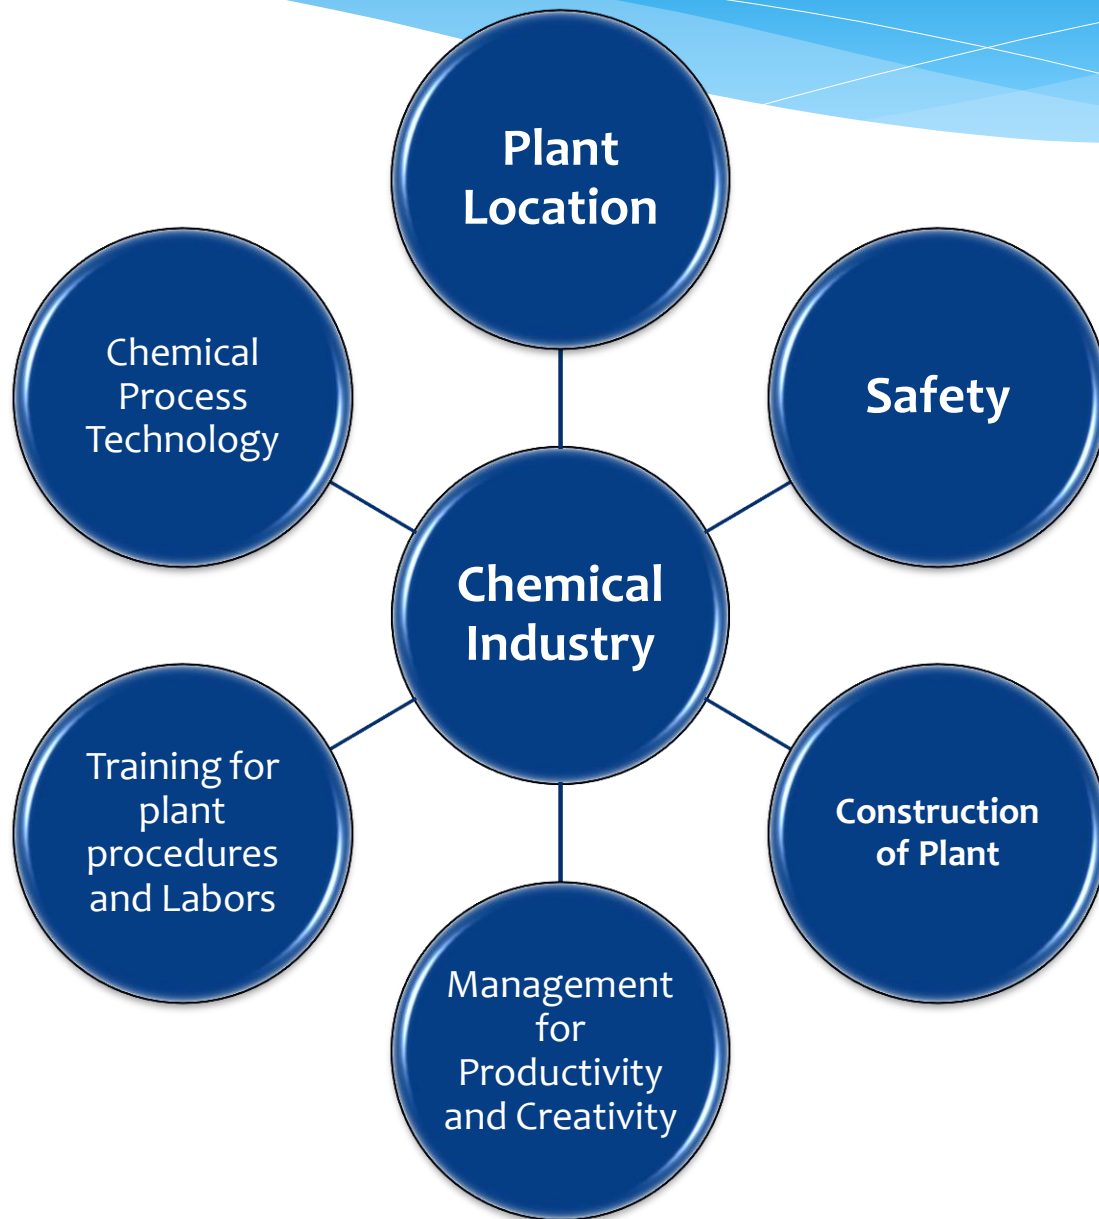

Maintenance  
Testing of raw materials  
Repairs  
Cash reserves

### Manufacturing cost

Labor  
Transport  
Supervising staff  
Electricity  
Water  
Fuel

# Selection Parameters of Chemical Industry

# Classification of Chemical Reaction

## Chemical Reactions

```
graph TD; A[Chemical Reactions] --> B[Homogeneous Reactions]; A --> C[Heterogeneous Reactions]; B --> D["1) Catalytic reactions<br/>2) Non-catalytic reactions"]; C --> E["1) Gas-Liquid reactions<br/>2) Gas-Solid reactions<br/>3) Liquid-Solid reactions<br/>4) Gas-Liquid-Solid reactions"];
```

### Homogeneous Reactions

### Heterogeneous Reactions

- 1) Catalytic reactions
- 2) Non-catalytic reactions

- 1) Gas- Liquid reactions
- 2) Gas- Solid reactions
- 3) Liquid- Solid reactions
- 4) Gas- Liquid- Solid reactions

# Batch and Continuous Operations

<b>Batch Operations</b>	<b>Continuous Operations</b>
Raw material is fed in one lot	Raw material is fed continuously
Apparatus is idle during charging and discharging	Apparatus is never idle during charging and discharging
Requires more labor	Do not requires more labor
Rate of reaction does not remain constant	Rate of reaction remain constant
Require more energy	Require less energy
Quality control is difficult	Quality control is obtained
Less profitable	More profitable

# Conversion, Selectivity and Yield

**Conversion:** It is expressed as a percentage and is related to the amount of reactant that is chemically converted to the another substance.

**Selectivity:** It refers to increasing the percentage of one of the products by keeping conditions favorable to the formation of that product.

**Yield:** It refers to the actual amount of product formed in the reaction.

# Intellectual Property (IP)

## Intellectual Property

```
graph TD; IP[Intellectual Property] --> IP1[Industrial Property]; IP --> IP2[Copy right]; IP1 --> IP1_list["i) Patents<br/>ii) Trademarks<br/>iii) Industrial design<br/>iv) Geographic indications"]; IP2 --> IP2_list["i) Literary works- novels, poems, films etc.<br/>ii) Artistic works- drawing, painting"]
```

### Industrial Property

- i) Patents
- ii) Trademarks
- iii) Industrial design
- iv) Geographic indications

### Copy right

- i) Literary works- novels, poems, films etc.
- ii) Artistic works- drawing, painting

**Copyright**

**Patent**

**Trademark**
